

FNP Sales Analysis — Executive Summary

Executive Summary

The **FNP Sales Analysis Dashboard** is an interactive **Microsoft Excel business analytics project** developed to evaluate sales performance and uncover actionable insights from transactional sales data.

The analysis covers **1,000 orders** and approximately **₹35.21 lakh in total revenue**, providing a comprehensive view of sales across **products, categories, occasions, months, order hours, and cities**. The dashboard also tracks **average customer spending** and **order-to-delivery time**, enabling both commercial and operational performance analysis.

The objective of this project is to transform raw FNP sales data into a decision-support dashboard that allows stakeholders to quickly identify **revenue drivers, customer purchasing patterns, high-performing products, seasonal demand, and geographic opportunities**.

Business Context

FNP operates in the gifting and celebration segment, where customer demand is strongly influenced by **festivals, relationships, special occasions, and seasonal events**.

Understanding these patterns is important for:

- Inventory planning
- Product assortment
- Seasonal marketing
- Customer targeting
- Regional expansion
- Promotional planning
- Delivery optimization

The dashboard brings these dimensions together into a single interactive analytical view.

Overall Performance

The dashboard highlights the following key performance indicators:

Metric	Performance
Total Orders	1,000
Total Revenue	₹35,20,984

Metric	Performance
Average Customer Spend	₹3,520.98
Average Order-to-Delivery Time	5.53 Days

These KPIs provide a quick overview of the company's sales scale, customer spending behavior, and delivery performance.

Revenue Analysis

Revenue by Occasion

Occasion-based demand is one of the most important revenue drivers in the dataset.

The analysis indicates strong performance from occasions such as:

- **Anniversary** — approximately ₹6.7 lakh
- **Raksha Bandhan** — approximately ₹6.3 lakh
- **All Occasions** — approximately ₹5.8 lakh
- **Holi** — approximately ₹5.7 lakh

Business Interpretation

The strong performance of these occasions indicates that customers frequently purchase gifting products for **relationship-based celebrations and festivals**.

This creates opportunities for FNP to:

- Launch occasion-specific product collections
- Create personalized gift recommendations
- Increase promotional activity before major occasions
- Develop occasion-based bundles
- Use historical demand to improve inventory planning

Product & Category Analysis

The category analysis identifies **Colors** as the leading revenue-generating category, contributing approximately **₹10 lakh** in revenue.

Other significant categories include:

- **Sweets**
- **Soft Toys**

- **Cakes**
- **Plants**
- **Mugs**
- **Raksha Bandhan products**

Business Interpretation

The results demonstrate that product categories contribute differently to overall revenue.

High-performing categories can be prioritized through:

- Homepage placement
- Promotional campaigns
- Product bundles
- Cross-selling
- Personalized recommendations

Lower-performing categories can be investigated to understand whether improvements are required in **pricing, product assortment, visibility, or customer targeting**.

Top Product Performance

The dashboard identifies the products contributing the highest revenue.

Top-performing products include:

1. **Magnum Set**
2. **Quia Gift**
3. **Dolores Gift**
4. **Harum Pack**
5. **Deserunt Box**

Business Interpretation

These products represent important revenue contributors and can be leveraged for:

- Featured product campaigns
- Cross-selling
- Gift bundles
- Seasonal promotions
- Personalized recommendations

Analyzing the characteristics of these products can also help identify patterns that can be replicated across the wider product portfolio.

Monthly Revenue Analysis

Monthly revenue analysis highlights significant fluctuations in sales throughout the year.

Higher-performing periods include:

- **February**
- **August**
- **November**

These variations indicate the influence of **festivals, celebrations, and gifting seasons** on customer purchasing behavior.

Business Opportunity

FPN can use historical monthly trends to improve:

- Demand forecasting
- Inventory allocation
- Marketing budgets
- Staffing requirements
- Promotional calendars

Preparing inventory and campaigns ahead of high-demand periods can help reduce stock shortages and capture additional revenue opportunities.

Order Timing Analysis

The dashboard analyzes revenue according to the **hour at which customers place orders**.

The analysis indicates stronger customer activity during the **evening period**, particularly around **7 PM–8 PM**.

Business Opportunity

This insight can support:

- Time-based promotional campaigns
- Evening flash offers
- Push notifications
- Personalized recommendations
- Targeted digital advertising

Understanding when customers are most likely to purchase allows marketing activity to be aligned with actual customer behavior.

Geographic Analysis

The dashboard analyzes order volume across cities and identifies locations with higher customer demand.

Some of the leading cities by order volume include:

- **Imphal**
- **Dhanbad**
- **Kavali**
- **Haridwar**
- **Dibrugarh**
- **Guntakal**

Business Interpretation

Geographic analysis helps identify markets where customer demand is relatively strong.

These locations can be evaluated for:

- Regional marketing campaigns
 - Improved delivery capabilities
 - Localized product recommendations
 - Customer acquisition strategies
 - Expansion opportunities
-

Delivery Performance

The dashboard records an average **order-to-delivery time of 5.53 days**.

Delivery time is an important operational metric for a gifting business because customers often purchase products for a **specific occasion or date**.

Business Opportunity

FPN can monitor delivery performance alongside sales to:

- Identify delivery bottlenecks
 - Improve logistics planning
 - Optimize fulfillment
 - Improve customer satisfaction
 - Reduce potential delays during peak seasons
-

Key Business Recommendations

1. Strengthen Occasion-Based Marketing

Increase targeted campaigns around high-performing occasions such as **Anniversary, Raksha Bandhan, and Holi**.

2. Prioritize High-Revenue Categories

Focus promotional visibility on categories that generate significant revenue while evaluating weaker categories for optimization.

3. Promote High-Performing Products

Use top products in featured campaigns, bundles, recommendations, and cross-selling strategies.

4. Optimize Seasonal Inventory

Use historical monthly revenue patterns to prepare inventory before expected demand spikes.

5. Leverage Peak Ordering Hours

Target customers during high-performing evening hours with personalized offers and digital campaigns.

6. Develop Regional Strategies

Identify high-order cities and evaluate them for increased marketing investment and localized customer acquisition.

7. Improve Delivery Efficiency

Monitor delivery time closely, particularly during high-demand seasons, to maintain a reliable customer experience.

Analytical Skills Demonstrated

This project demonstrates practical skills in:

- **Microsoft Excel**
- Data Cleaning
- Data Transformation
- Pivot Tables
- Pivot Charts
- Excel Formulas
- KPI Development

- Interactive Slicers
 - Dashboard Design
 - Sales Analysis
 - Revenue Analysis
 - Product Analysis
 - Customer Analysis
 - Time-Series Analysis
 - Geographic Analysis
 - Business Intelligence
 - Data Visualization
 - Business Recommendations
-

Project Impact

The FNP Sales Analysis Dashboard converts raw transactional data into a **structured business intelligence solution**.

Instead of reviewing individual transactions, stakeholders can use the dashboard to quickly answer questions such as:

- How much revenue is being generated?
- Which occasions drive the most sales?
- Which product categories perform best?
- Which products generate the highest revenue?
- Which months have the strongest sales?
- When are customers most likely to place orders?
- Which cities generate the highest order volumes?
- How long does it take to deliver orders?

This makes the dashboard useful for **sales planning, marketing strategy, product management, inventory planning, and operational decision-making**.

Conclusion

The FNP Sales Analysis project demonstrates how **Excel can be used to transform raw sales data into actionable business insights**.

The analysis reveals that FNP's performance is strongly influenced by **occasion-based demand, product categories, seasonal trends, customer ordering behavior, and geographic distribution**.

By combining sales, product, customer, time, location, and delivery metrics in a single interactive dashboard, the project provides a clear foundation for **data-driven decision-making and business performance optimization**.
